Seeking a 9 – 12 week software engineering internship · June 21 – late Sept 2027 · EU citizen

## Education

**MSc in Engineering (Diplôme d'Ingénieur), Computer Science**, IMT Nord Europe Expected 2028  
*Institut Mines-Télécom · work-study program · this internship fulfills the degree's international mobility requirement*

**Bachelor of Technology (BUT) in Computer Science**, IUT de Lens, Université d'Artois 2025  
*Application design and development track*

## Skills

**Languages:** PHP, JavaScript, TypeScript, Java, Python, SQL  
**Frameworks:** Laravel, React, Next.js, Spring Boot, Bootstrap, jQuery  
**Databases:** SQL Server, MySQL, MongoDB  
**DevOps and Tools:** Git, GitLab CI, Docker, Linux, Prometheus, Grafana, Vite  
**AI-Assisted Dev:** Claude Code, MCP, custom agents and hooks

## Experience

**Software Engineer Apprentice**, Arjo France – France Sept 2025 – Present  
*Swedish medical-device group, 7,000 employees in 100+ countries, ISO 13485 and ISO 9001 certified*

- Developed and maintained internal apps used daily by 500+ employees in a regulated medical-device setting
- Built a spare-parts maintenance module end to end (9 back-office pages) that replaced Excel and PDF handling and computes customer-specific pricing from the M3 ERP
- Took the module from technical design to production through 30 rounds of user feedback
- Modernized a legacy PHP monolith by adding server-side pagination and sorting, rebuilding 20+ scheduled jobs on a shared template and fixing a data-access layer defect
- Set up the team's AI-assisted development workflow (custom agents, hooks, skills), applied to production code under systematic human review

*Technologies: PHP 8, SQL Server, JavaScript, jQuery, Bootstrap, Vite*

**Web Developer Apprentice**, IMT Nord Europe – France Feb 2024 – Aug 2025  
*Digital Tools and Services team, IT department of a French engineering school*

- Developed 3 intranet web applications as sole developer for the school's IT department (~100 users), covering database design, back end and front end
- Managed delivery through a GitLab kanban board (1 issue per task) and staged every release in pre-production

*Technologies: PHP, Laravel, MySQL, JavaScript, Bootstrap*

## Projects

**RayTracer** · Java, Metal, Vulkan

- Built a GPU rendering engine with 3 interchangeable backends and automatic fallback; the Metal path renders 2.0x to 13.9x faster than the CPU, verified pixel by pixel on 7 scenes

**F1dle** · React, TypeScript, Laravel, MySQL, Docker

- Shipped a live Formula 1 puzzle site with 6 game modes in 2 languages, deployed as 3 Fly.io apps with Prometheus and Grafana monitoring

**F1 Ticket System** · Solidity, React

- Built an Ethereum ticketing dApp (academic): 39-function smart contract, pull payments, dynamic pricing
- 6 more projects with code and live demos at mael-demory.dev

## Languages and Interests

**Languages:** French (native), English (C1, TOEIC 900/990), Spanish (B1)  
**Interests:** Formula 1, travel (8 countries), photography, weight training
